

Caldera Medical Receives CE Mark for Desara™

AGOURA HILLS, Calif., September 21, 2007 – Caldera Medical, Inc., a medical device company focused exclusively on differentiated, high-impact products across the gynecology, urology, and urogynecology specialties, today announced that their Desara™ Sling has been awarded the CE Mark certification. The CE mark indicates that the Desara Sling is in accordance with the Medical Device Directive of the European Union, allowing for this device to be marketed and sold throughout the European Economic Area.

Desara is uniquely designed to treat female stress urinary incontinence and vaginal vault prolapse, offering a highly functional and flexible solution. Comprised of large-pore knitted monofilament polypropylene, Desara maintains its shape while also providing an easy to remove sleeve, which allows for precise tension adjustments. Featuring a precisely engineered knit that maintains shape integrity while under tension, Desara does not narrow or fray like other slings.

When used with Caldera's reusable surgical instruments, Desara offers a complete system that offers surgeons outstanding ease of use, the ability to change surgical technique intra-operatively, and environmental friendliness. Desara is the only sling system on the market that is available for all surgical approaches, providing doctors with the multiple clinical options they have asked for in a sling system.

Albert Beran, Caldera's Director of Sales & Marketing, International Markets, said, "We are proud to receive the CE Mark certification, adding, "We look forward to sharing Desara with surgeons around the world."
